

Python Operators – Complete Guide

Arithmetic Operators

```
# / - Quotient float division
# // - Quotient integer division
# % - Remainder
```

```
a = 10
b = 5
```

```
print(a / b)    # 2.0
print(a // b)   # 2
print(b // a)   # 0
print(b / a)    # 0.5
```

```
print(a % b)    # 0
print(b % a)    # 5
```

```
print(a + b)    # 15
print(a - b)    # 5
print(a * b)    # 50
print(a ** 2)   # 100
```

Addition of Two Numbers

```
# Inputs
a = int(input("Enter a: "))
b = int(input("Enter b: "))

# Logic building
c = a + b

# Printing results
print("The sum of", a, "and", b, "is", c)
print("The sum of {} and {} is {}".format(a, b, c))
print(f"The sum of {a} and {b} is {c}")
```

Assignment Operators

```
a = 10
```

```
# Increment and Decrement
a = a + 2
print(a)
a = a - 2
```

```
print(a)

# Short-hand Assignment
a += 2 # a = a + 2
print(a)
a -= 2 # a = a - 2
print(a)
a *= 2 # a = a * 2
print(a)
```

Membership Operators

```
fruits = ["apple", "orange", "banana"]

print("apple" in fruits)      # True
print("jackfruit" in fruits) # False
print("jackfruit" not in fruits) # True
```

Comparison Operators

```
a = 10
b = 5

print(a > b) # True
print(a < b) # False
print(a >= b) # True
print(a <= b) # False
print(a == b) # False
print(a != b) # True
```
